Today, organisations are facing a lot of potential threats from hackers. There comes the need for security professionals to think about how vulnerabilities are accessed by hackers. Hence Ethical Hacking can be defined as the method of finding out the vulnerabilities and weaknesses of any computer network and fixing them before actual cyber attacks occur. Some of the technical skills needed to become an ethical hacker are strong Networking skills, Mastering Operating systems, Programming and Scripting knowledge, mastering various security tools, understanding of security concepts, and fundamentals of cryptography. To gain knowledge about the techniques involved in Ethical hacking, FITA Academy provides extensive training by industry experts with hands-on practical experience.
